

Take Control

with Fuel Tanker Level Monitoring

GuardMagic Fuel Tanker Level Monitoring System

This is an advanced **remote fuel level measuring and car tracking** device for road tankers.

Up to 11 compartments can be fitted with the sensors, through the hatches, and connected by a special vandal proof communication cable.

The level data is sent to a GPRS module where it is relayed to a secured server for online real-time monitoring of the levels, including the location of the vehicle on Google Earth Map or client specific maps, using GPS coordinates.

Continuous online monitoring of cargo levels and vehicle location is provided by the web based software and includes information such as:

- Empty and full compartments
- Any filling event and where it occurred with a time and date stamp
- Any draining event and where it occurred with a time and date stamp
- Amount of cargo filled or drained from compartments
- Route and position of tanker on Google maps
- Speed and direction of tanker

These reports can be accessed from any computer in the world connected to the internet. Unlimited number of users can view the information, with specific user login passwords.

Advantages

Clients will be able to

- Get online reports on level of cargo fuel on each compartment
- Verify location of filling or draining of compartments
- Assign routes and regions of tanker operation
- Get reports on crashed or overturned tankers
